

UCLPartners Quality Improvement Opportunities

Introduction to quality improvement

Based on the Institute for Healthcare Improvement's model for improvement, this one-day session is aimed at anyone interested in learning about the methodology and models UCLPartners use to support quality improvement work, covering all the basics required to understand and participate in QI initiatives.

Human Factors for health-care professionals

Human factors encompass all factors that can influence people and their behaviour. In a work context, human factors are the environmental, organisational and occupational factors, as well as individual characteristics which influence behaviour at work. Our one-day course will help you and your team understand the crucial part human factors play in performance.

Measurement for improvement

When it comes to improving quality, and applying quality improvement methodologies, measurement is often perceived as a challenge. However, it can be more straightforward and less time intensive than expected. This one-day session will equip you with the skills and knowledge to successfully measure and evaluate your improvement work.

Quality improvement clinics

Are you currently working on a quality improvement project? Do you need some assistance in getting it off the ground, engaging stakeholders or maintaining momentum? We at UCLPartners are delighted to announce the launch of quality improvement clinics, providing one-on-one support to people and teams who are running QI projects in all health and social care settings.

Who should attend?

These courses are all designed for anyone working in health and social care organisations, within the [UCLPartners region](#), who would like support with their QI project work.
